Completed on	Saturday, 10 October 2026, 2:33 PM
Time taken	5 mins 56 secs
Marks	1.00/1.00
Grade	**10.00** out of 10.00 (**100**%)

Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using the counter method.

```
void func(int n)
{
    if(n==1)
    {
      printf("*");
    }
    else
    {
     for(int i=1; i<=n; i++)
     {
       for(int j=1; j<=n; j++)
       {
          printf("*");
          printf("*");
          break;
       }
     }
   }
 }
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer: (penalty regime: 0 %)

```
#include <stdio.h>

int main() {
    int n;
    int count = 0;

    scanf("%d", &n);
    count++;

    if (n == 1) {
        count++;
    }
    else {
        for (int i = 1; i <= n; i++) {
            count++;

        for (int j = 1; j <= n; j++) {
            count++;
            count++;
            count++;
            break;
        }

        count++;
    }

    count++;
```

```
29  }
30      printf("%d", count);
31
32      return 0;
33  }
34
```

	Input	Expected	Got	
✔	2	12	12	✔
✔	1000	5002	5002	✔
✔	143	717	717	✔

Passed all tests! ✔

Correct

Marks for this submission: 1.00/1.00.
